## Asymptomatic MR: Neuro-Hormones

Dr Julien Magne, PhD  
CHU Limoges, France

[www.eurovalvecongress.com](http://www.eurovalvecongress.com)

# BNP Molecular Forms and Processing

Brain Natriuretic Peptide: Sudoh et al, *Nature*, 1988

BNP and its inactive amino terminal portion are neurohormones released by the ventricles in response to increased LV wall stress

SCIENCEPHOTOLIBRARY  
SCIENCEPHOTOGRAPHY

*Lam et al. JACC, 2007*

# BNP Release Activation

# Characteristics of an 'ideal' biomarker

## Specific

**High myocardium/serum ratio**

**Not present in non-cardiac tissue, even pathologically**

## Sensitive

**Zero baseline**

**Marker of 'early,' reversible cardiotoxicity**

**Immediate release with injury** 🙌

## Predictive

**Long half-life in blood**

**Release proportionate to extent of injury** 🙌

## Robust

**Rapid, simple, and accurate** 🙌

**Non-invasive / accessible / unexpensive** 🙌

# The Place of BNP in current VHD Guidelines

## ESC 2012: General comments on biomarkers in MR

*“B-type natriuretic peptide (BNP) serum level has been shown to be related to functional class and prognosis, particularly in AS and MR.”*

*“Low-plasma BNP has a high negative predictive value and may be helpful for the follow-up of asymptomatic patients”*

## **ACC/AHA 2014:**

*“Although the data are preliminary, the finding of a rising B-type natriuretic peptide could be helpful as another factor in deciding the optimal timing of mitral surgery.”*

*Vahanian et al. EHJ, 2012*

*Nishimura, Otto et al. JACC, 2014*

# BNP level in Mitral Regurgitation

BNP level is not related to MR itself but to the atrial and ventricular consequences of MR

124 patients with primary MR; BNP vs. MR severity (ERO):  $r=0.17$ ,  $p=0.06$

Detaint et al. Circulation, 2005

# BNP level in Mitral Regurgitation

## Determinants of BNP level

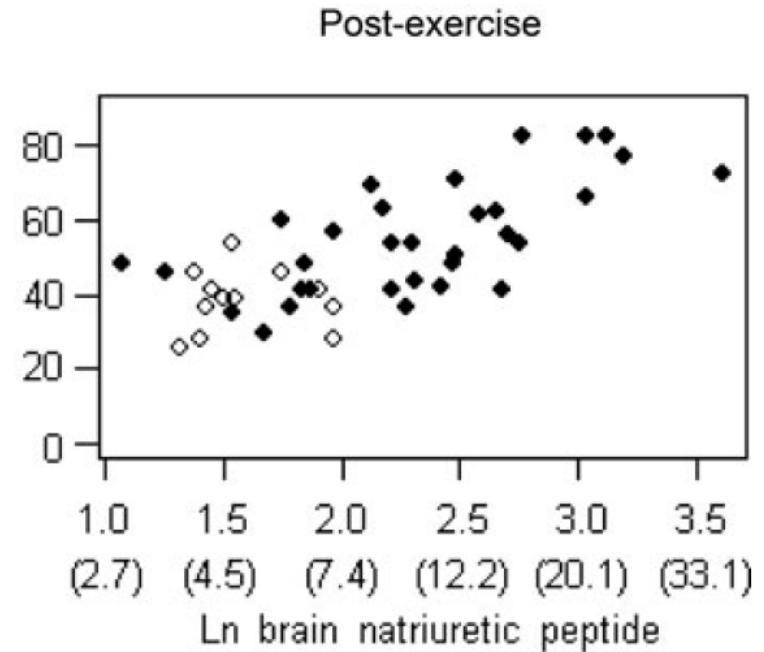

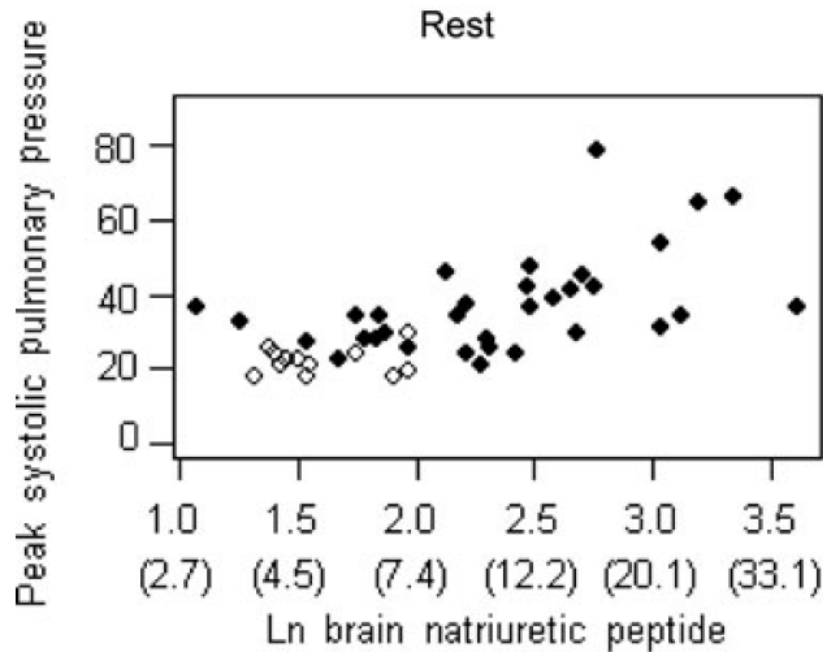

Variable	BNP, Multivariate Analysis ( <i>P</i> )
LA volume	0.0001
AF	0.006
ESVI	0.02
NYHA class	0.01
Sex	0.01
Age	0.0003

*Detaint et al. Circ, 2005*

## Impact of BNP level on survival

# BNP level and Exercise Parameters

**n=33 asymptomatic or mild symptoms, moderate to severe MR, LVEF>60%**

***Kerr et al. EHJ, 2008***

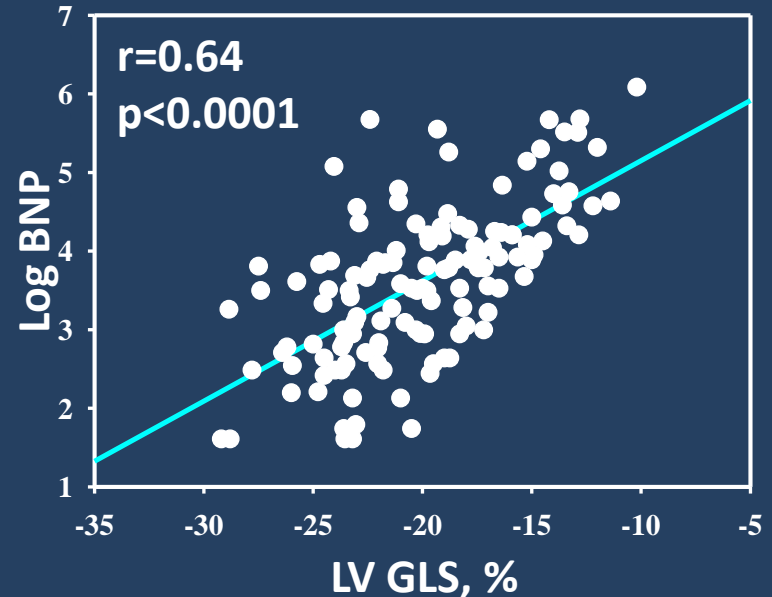

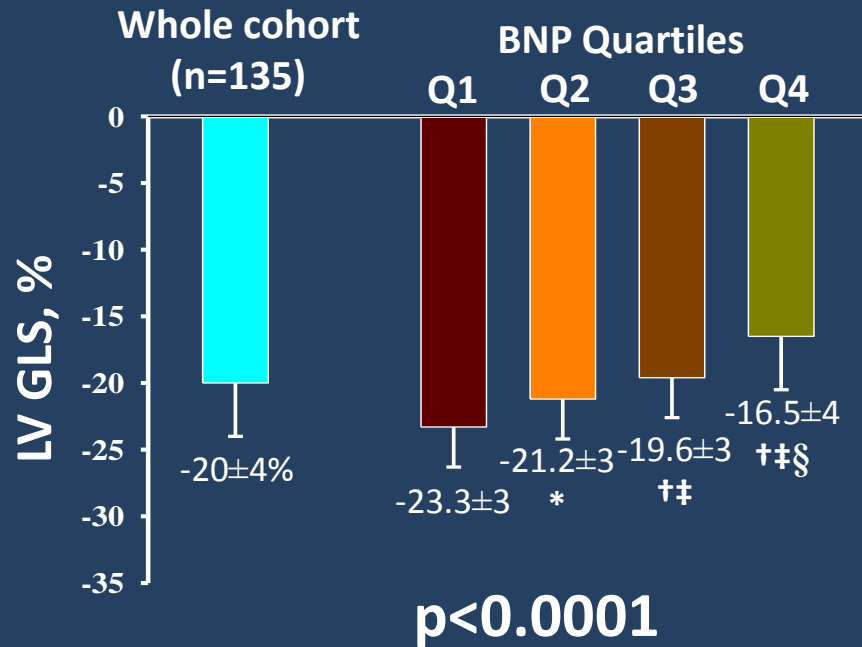

# LV Longitudinal Function and BNP Level

ORIGINAL ARTICLE

Prognostic importance of brain natriuretic peptide and left ventricular longitudinal function in asymptomatic degenerative mitral regurgitation

Bi-centric study, n=135 asymptomatic MR (moderate & severe) with no LV dysfunction/dilatation

Julien Magne,<sup>1</sup> Haifa Mahjoub,<sup>2</sup> Luc A Pierard,<sup>1</sup> Kim O'Connor,<sup>1,2</sup> Charles Pirlet,<sup>1</sup> Philippe Pibarot,<sup>2</sup> Patrizio Lancellotti<sup>1</sup>

# Determinants of BNP Level

Variables	Log BNP			BNP $\geq$ 40 pg/ml		
	$\beta$	SE	p Value	OR	95% CI	p Value
Age, per years	0.01	0.01	0.10	1.01	0.97 to 1.06	0.56
Male gender*	0.03	0.12	0.82	2.17	0.65 to 7.2	0.20
iLVES diameter, per mm/m <sup>2</sup>	0.03	0.02	0.12	1.01	0.86 to 1.8	0.92
E/Ea ratio	0.20	0.13	0.12	1.22	0.44 to 3.35	0.70
Deceleration time, per ms	0.01	0.002	0.003	1.02	1.0 to 1.03	0.043
iLA volume, per ml/m <sup>2</sup>	0.01	0.004	0.008	1.05	1.00 to 1.09	0.034
SPAP, per mm Hg	0.01	0.01	0.12	1.01	0.95 to 1.08	0.73
Global longitudinal strain, per %	0.13	0.020	<0.0001	1.33	1.12 to 1.59	0.0010

**LV diastolic function + Disease chronicity +  
Longitudinal function + ...  
= BNP level**

# BNP level in Asymptomatic MR

	Derivation Set			Validation Set		
	BNP <105 pg/ml (n = 130)	BNP ≥105 pg/ml (n = 37)	p Value	BNP <105 pg/ml (n = 75)	BNP ≥105 pg/ml (n = 27)	p Value
Age (yrs)	61 ± 6	66 ± 8	0.07	62 ± 5	65 ± 7	0.09
Male	77 (59)	24 (64)	0.38	47 (63)	18 (65)	0.94
Atrial fibrillation	12 (9)	5 (13)	0.17	5 (6.6)	3 (7.4)	0.77
Hypertension	20 (15)	8 (21)	0.22	9 (12)	3 (10)	0.82
Systolic arterial pressure (mm Hg)	139 ± 22 (93-170)	135 ± 18 (90-155)	0.27	137 ± 28 (91-160)	136 ± 21 (90-150)	0.77
Heart rate (beats/min)	76 ± 10 (62-98)	69 ± 11 (55-89)	0.15	75 ± 10 (60-101)	70 ± 12 (55-94)	0.45
NFL, n (%)	2 (1.5)	4 (10)	0.001	1 (1.3)	1 (3.7)	0.02
Exercise capacity (METs)	9.5 (8.5-11)	9.0 (8.0-12)	0.39	9.0 (8.0-14)	8.5 (7.5-11)	0.45
Ejection fraction (%)	68 (65-72)	65 (63-68)	0.04	68 (65-70)	66 (63-69)	0.04
End-diastolic diameter/BSA (mm/m <sup>2</sup> )	33 (25-38)	40 (29-46)	0.08	32 (24-37)	39 (31-45)	0.09
End-systolic diameter/BSA (mm/m <sup>2</sup> )	18 (14-23)	24 (19-29)	0.001	18 (14-22)	25 (21-30)	0.01
Regurgitant volume (ml/beat)	65 (63-70)	76 (66-84)	0.01	66 (62-71)	76 (68-86)	0.01
Regurgitant fraction (%)	49 (46-55)	58 (49-64)	0.01	49 (45-57)	60 (52-67)	0.01
EROA (mm <sup>2</sup> )	53 (46-61)	65 (47-74)	0.0001	46 (44-57)	67 (49-81)	0.001
AV/BSA (cm <sup>3</sup> /m <sup>2</sup> )	65 (42-73)	76 (49-84)	0.03	64 (40-69)	77 (48-82)	0.02
Pulmonary artery systolic pressure (mm Hg)	24 (18-30)	32 (24-38)	0.04	25 (15-29)	35 (22-39)	0.037

⇒ BNP is a good marker of advanced stage of the disease

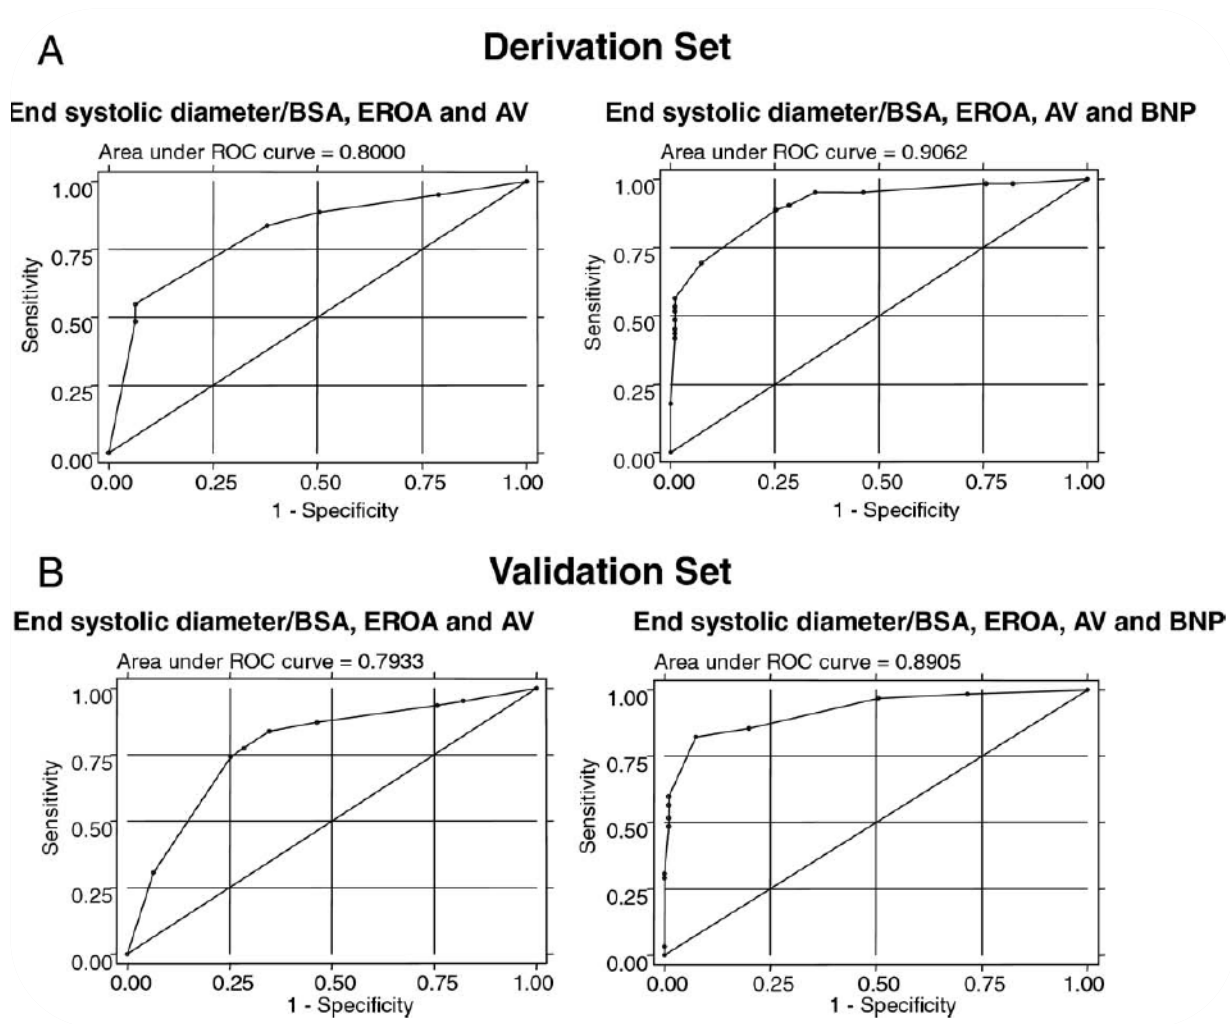

# BNP level in Asymptomatic MR

Multivariate predictor of combined end-point

	OR (95% CI)	p Value
BNP $\geq 105$ pg/ml	4.6 (2.7-11.6)	0.0001
End-systolic diameter/BSA $> 22$ mm/m <sup>2</sup>	3.4 (1.6-10.7)	0.01
EROA $> 55$ mm <sup>2</sup>	4.2 (2.1-11.4)	0.001
EROA $> 22$ mm <sup>2</sup>	4.3 (2.1-11.4)	0.001

# BNP level in Asymptomatic MR

*Pizarro et al. JACC, 2009*

# BNP and Impact on Outcome

## KM curves: median of BNP

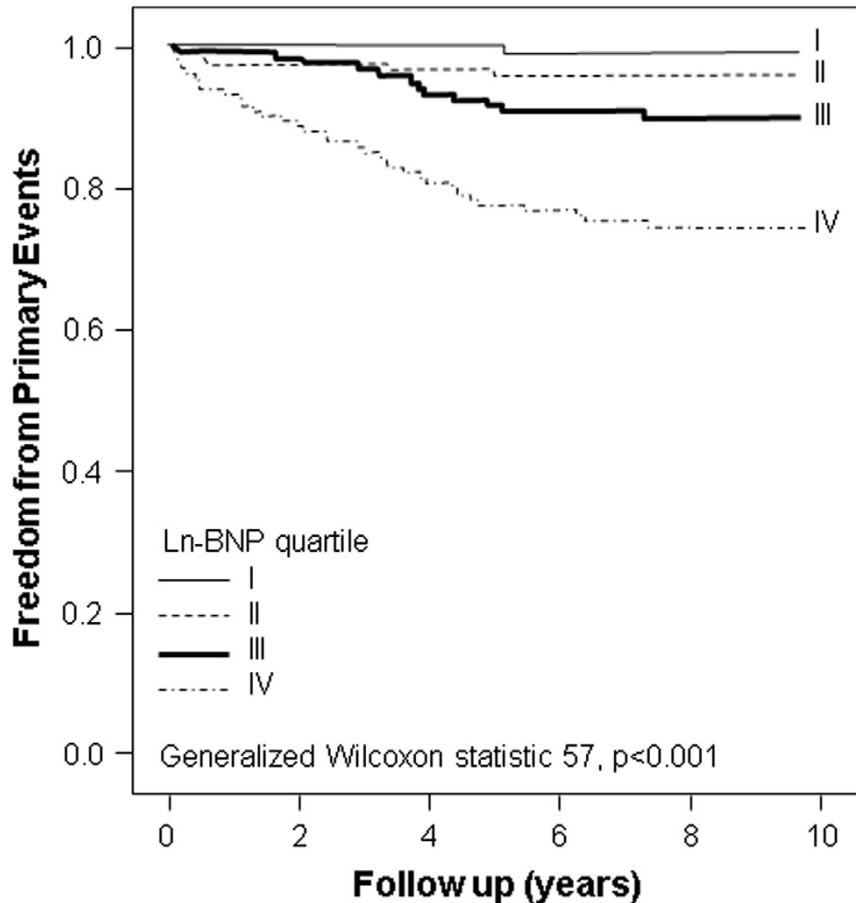

## Multivariable Analysis

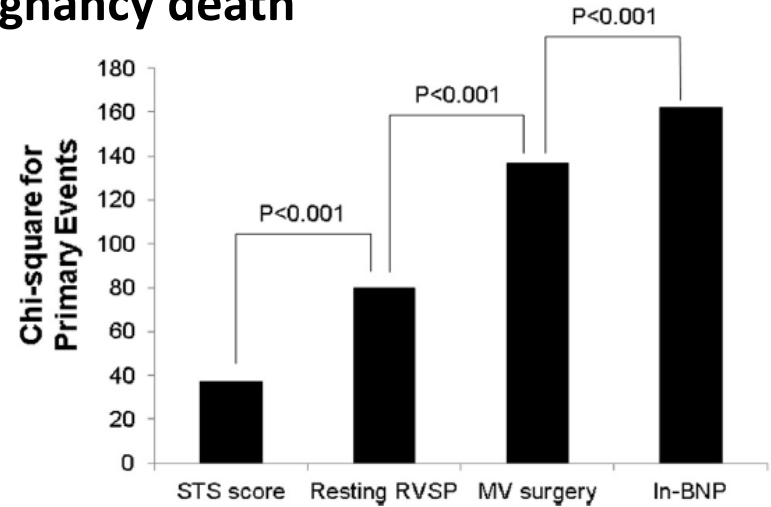

HR=3.5, 95%CI: 1.7-7.2, p=0.001

# BNP and Impact on Outcome

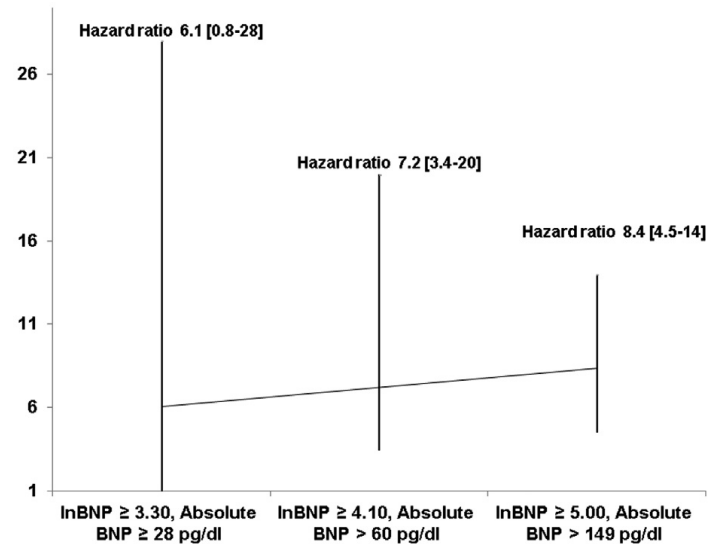

n=548 asymptomatic patients, preserved LVEF, moderate to severe MR, primary end-point= non-malignancy death

*Mentias et al. AJC, 2016*

Hazard ratio with confidence interval

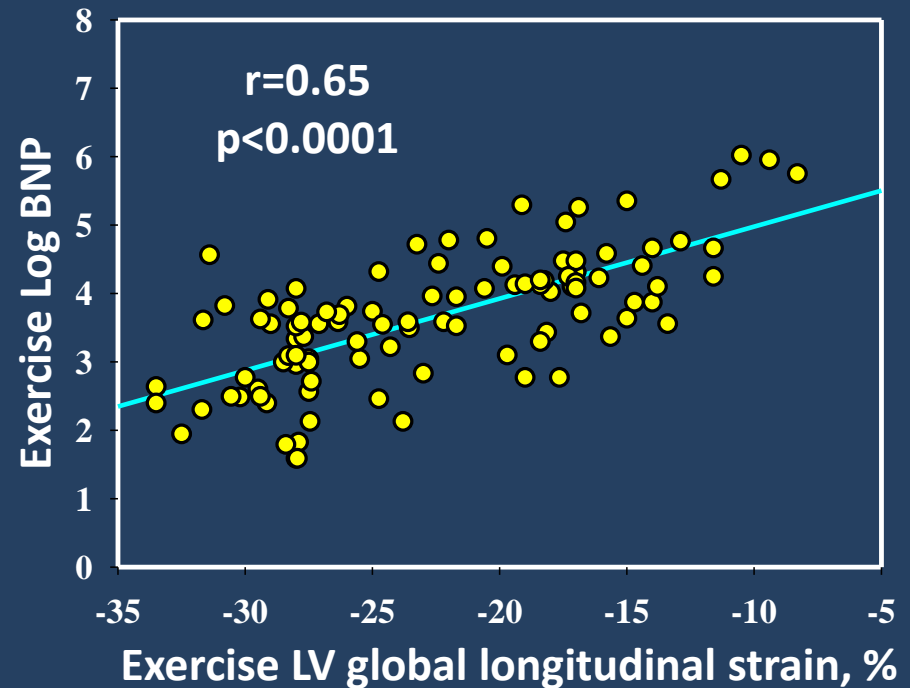

# Exercise BNP and Impact on Outcome

BNP level significantly increase during exercise

Exercise BNP is determined by ex. LV longitudinal function

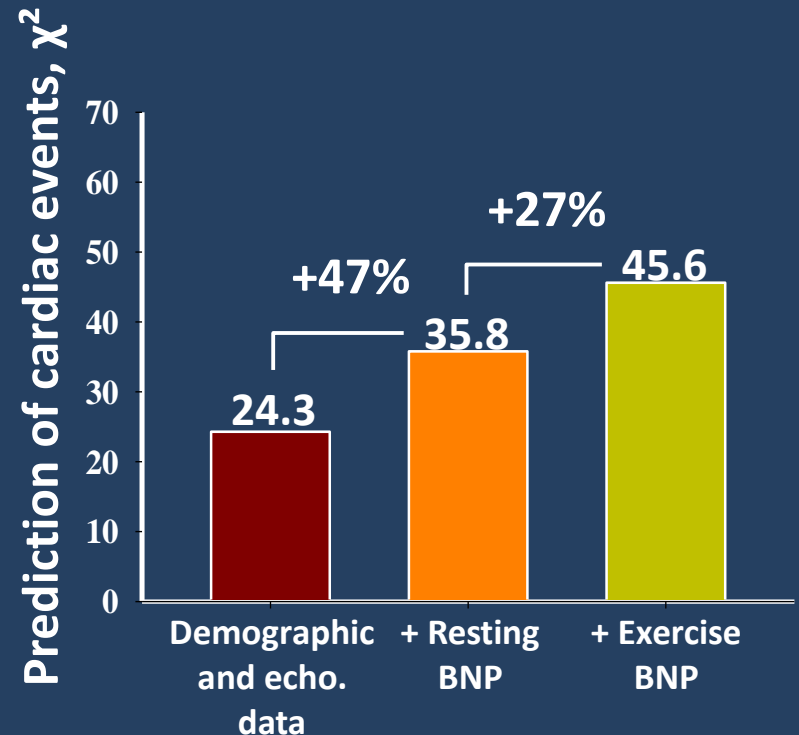

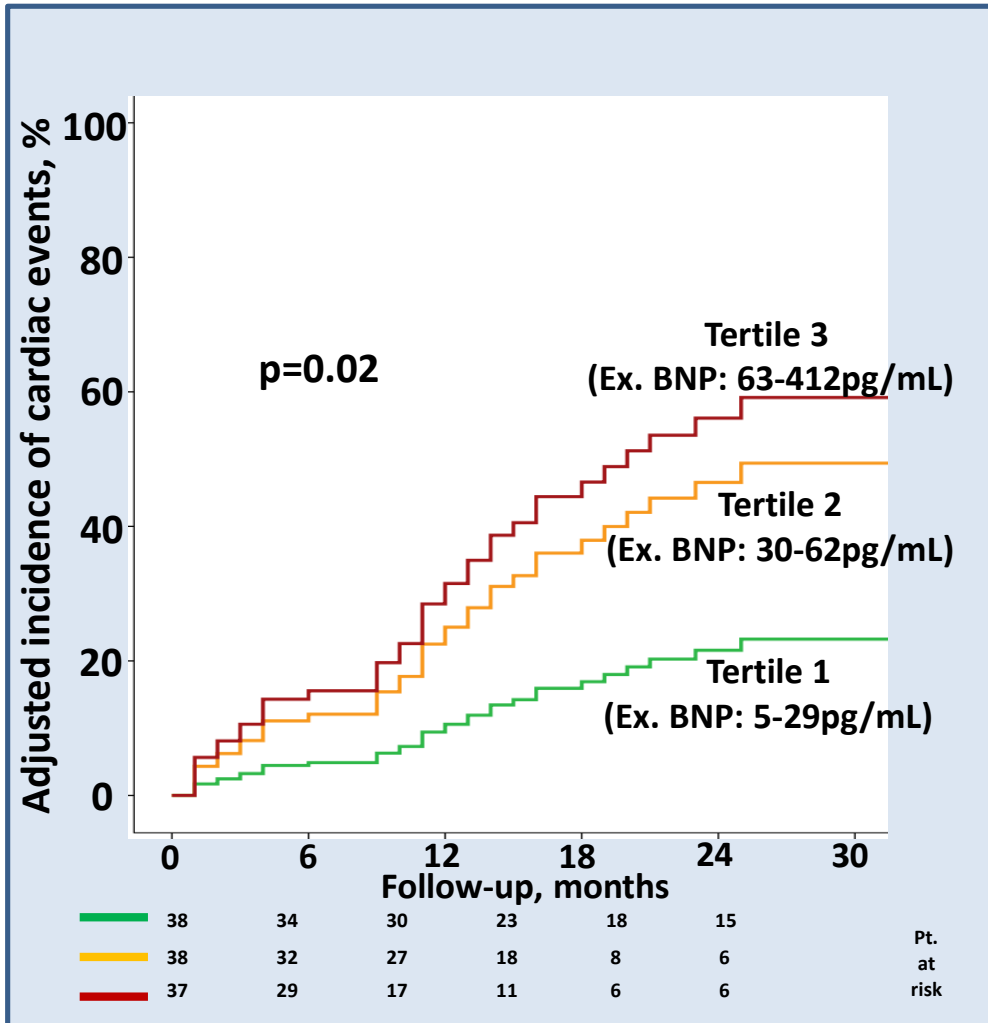

# Exercise BNP and Impact on Outcome

Exercise BNP level and outcome

Incremental prognostic value of exercise BNP

*Magne et al. Eur J HF 2012*

# Take Home Messages!

- **Despite lack of recommendation, BNP level is of high clinical and prognostic importance in asymptomatic patients with MR**
- **LV diastolic dysfunction, LA, Longitudinal function...are determinants of BNP level**
- **Exercise BNP level may have incremental prognostic value**
- **In asymptomatic patients with severe MR, no LV dysfunction/dilatation, and high BNP level...follow-up should be shorten/surgery could be discussed...**

# EuroEcho Imaging 2016

7-10 December - Leipzig, Germany

**Main themes**  
Imaging in  
arrhythmias  
& Aortic valve  
diseases

Visit the Leipzig Convention Bureau stand C10

**Abstract submission**

**1 April - 31 May**

Early registration

18 April - 30 September

Late registration

1 - 31 October

Last minute registration

1 - 30 November

Special advantages for EACVI members (abstract deadline extension, reduced fees and lot more...)
