

16TH INTERNATIONAL EXPERTS SYMPOSIUM
CRITICAL ISSUES
in aortic endografting 2012

**Predicting type B
aortic dissection
outcomes with
computational flow
analysis**

Richard Gibbs

Imperial Vascular Unit

St Mary's Hospital

London UK

May 24 & 25
LILLE, FRANCE

2012

Who needs early intervention to prevent long term dilatation?

Survival of patients with type B dissection

International registry of acute aortic dissection

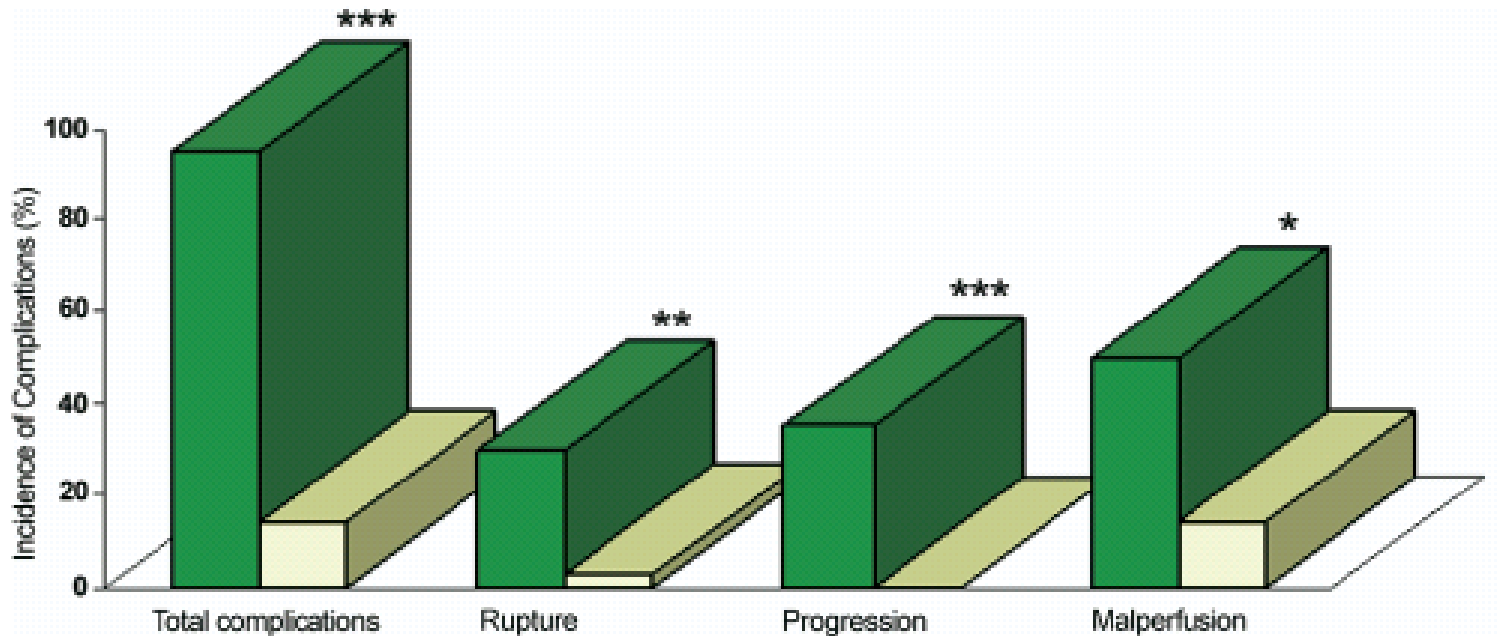

uncomplicated

complicated

Treatment	Medical	Surgical	Stent
n	78%	11%	11%
In hosp mortality	23/240 (10%)	12/42 (29%)	4/36 (11%)
1 year survival discharged alive	90.3%	95.8%	88.9%
3 year survival discharged alive	77.6%	82.8%	76.2%

Predicting the need for intervention:

Influence of maximal false lumen area on acute complications

MFLA >922mm²

MFLA <922mm²

Chang *et al.* JACC 2008

Predicting the need for intervention:

Influence of patent false lumen on long term complications

Akutsu *et al.* EJCVS 2004

Predicting the need for intervention:

Influence of patent false lumen on future dilatation

Risk Factors for Increase in Diameter

Patient Characteristics	Increase (n=132)	No Increase (n=45)	Univariate		Multivariate		
			χ^2	P	P	95%CI	OR
Gender, male, n (%)	79 (59.8)	33 (73.3)	2.08	0.1492	0.5762	0.205–2.415	0.703
Age <60 y, n (%)	79 (59.8)	35 (77.8)	4.71	0.0301	0.4556	0.257–1.839	0.688
Diabetes mellitus, n (%)	8 (6.1)	6 (13.3)	1.55	0.2138	0.9537	0.217–4.215	0.957
Atherosclerotic disease, n (%)	27 (20.5)	9 (20.0)	0	>0.9999	0.9313	0.328–2.779	0.954
Smoking <20 y, n (%)	23 (17.4)	13 (28.9)	2.00	0.1588	0.8632	0.306–2.701	0.909
Presence of blood flow in false lumen, n (%)	112 (85.6)	13 (28.9)	49.92	<0.0001	<0.0001	5.525–35.282	13.961
Entry site in arch, n (%)	117 (84.8)	37 (82.2)	1.22	0.2691	0.2729	0.662–4.293	1.686
Initial diameter <40 mm, n (%)	22 (16.7)	7 (15.6)	0	>0.9999	0.3074	0.565–6.112	1.859
COPD, n (%)	20 (15.2)	2 (4.4)	3.35	0.0654	0.1261	0.673–24.913	4.093
BP <140 mm Hg during follow-up period, n (%)	9 (6.8)	1 (2.2)	0.61	0.4192	0.3571	0.226–61.591	3.733

Sueyoshi E *et al.* Circulation 2004

Methods: Computational Fluid Dynamic Reconstructions

‘Analysis of Flow Patterns in a Patient-specific Aortic Dissection Model’. Z. Cheng, F.P.P. Tan, C.V. Riga, C.D. Bicknell, M.S. Hamady, R.G.J. Gibbs, N.B. Wood, X.Y. Xu. *Journal of Biomechanical Engineering*. 132(5), 2010

Methods: Computational Fluid Dynamic Reconstructions

- Aortic Morphology
- Entry Tear morphology
- Flow Velocity
- Wall Shear Stress
- Turbulence
- OSI

Methods: Subjects (n=10)

- 2/10: Acute complicated type B dissection -TEVAR
- 2/10 : Acute uncomplicated dissections medically managed
- 6/10 : Late complications of chronic Type B dissection- TEVAR

Method: Subjects

Parameters Examined

❖ Geometric Features

- Circumferential diameter:
- Longitudinal diameter:
- Tear location: distance from arch top

❖ Flow rate into false lumen

- Percentage of flow rate at tear

❖ Disturbed flow and turbulence in flow domain

- Turbulence Intensity (Tu)

❖ Wall Shear Stress (WSS)

Results: Tear Size and Position

Subject No.	Primary Tear Dimensions (mm)			Distance of Primary Tear from Arch Top (mm)
	Longitudinal	Cirumferential	Ratio (tear/true lumen diameter)	
1	37.3	38	73%	21
2	13.5	8	21%	54
3	33	36	93%	8
4	24	20	58%	45
5	28.8	19.6	82%	1.2
6	15.4	32.4	29%	99
7	24	9	31%	12
8	18	10.8	32%	20
9	38.5	24	55%	0.6
10	38.5	35.4	88%	10

Velocity (m/s)

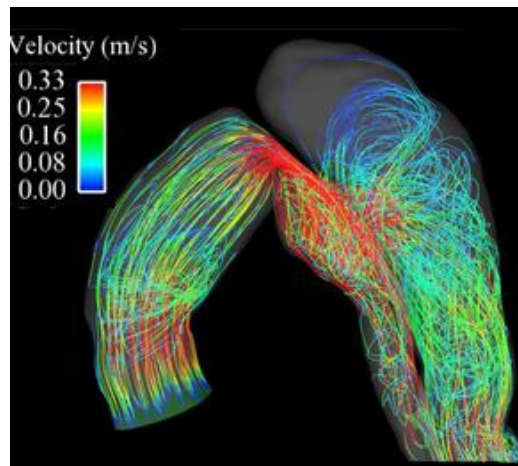

Results: Entry Tears

Different geometric characteristics of entry tear among patients

Particle Tracking: Flow patterns in dissected aorta

Results: Flow Rate into FL

Subject No.	1	2	3	4	5	6	7	8	9	10
% Flow rate into false lumen	85.3%	25.6%	95.5%	N/A*	76.7%	60.4%	51%	40.3%	78%	90.8%

Results: Flow Rate into FL vs Tear Size

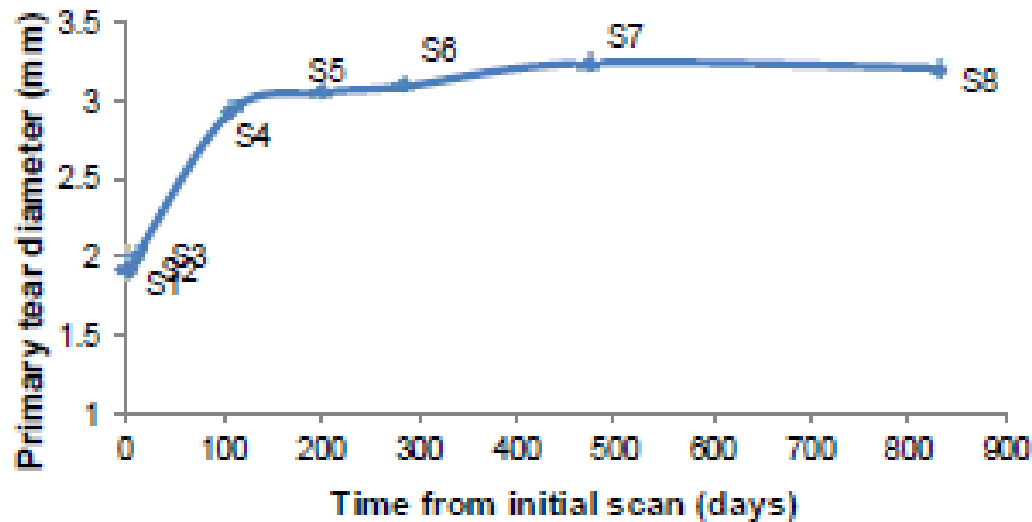

Results: Flow Rate into FL vs Tear Location

Subject No.	1	2	3	4	5	6	7	8	9	10
Flow rate at FL	85.3%	25.6%	95.5%	N/A	76.7%	60.4%	51%	40.3%	78%	90.8%
Distance of tear from arch (mm)	21	54	8	45	1.2	99	12	20	0.6	10

Longitudinal Follow up Type B Dissection

TAWSS; RRT; FL Thrombosis

TAWSS on aortic wall at different time periods

RRT Contours and Thrombosis of FL

Conclusions

Small tear area
Low tear location

Limited flow rate into false lumen

Limited flow rate into false lumen
Low wall shear stress
Low turbulence intensity

Thrombosis of false lumen

Stable
Status

Large tear area
Proximal Tear location

Maintenance
FLP

High wall shear stress
High turbulence intensity

Acute
Complications
? Chronic
dilatation
